Delegated Decision

Application Number:	25/1309/CAT	Delegation Briefing:	
Decision Type:	Permitted	Date:	31/10/2025
Location Address:	Underwood Cottage Balls Farm Road Ide Exeter EX2 9RA		
Proposal:	<p>Previously applied and had work accepted on application 25/1193/CAT. However upon another site visit, I've realised, I made a mistake and identified the wrong tree. I've spoken to someone called Emily in the planning department and she advised submitting another correct application. Requesting a full dismantle and removal of a Quercus Ilex (Holm Oak) within the property, with urgency. As casing structure issues to a grade 2 listed cottage. The Quercus is fairly mature, with a gradual lean towards a grade 2 listed building and listed out building (garage). The canopy is now within very close proximity to the building, this however is not the main concern. The Quercus has grown in a very space between a listed cob wall, outbuilding and a grade 2 listed building to the rear of underwood cottage. The Quercus is causing significant issues to the foundations of the main rear wall on the grade 2 listed cottage to the rear of underwood cottage. The cottage is occupied by a 92 year old house bound man. A builder has visited the property and spoken to Mr. Castle (underwood cottage) and owner of the Quercus Ilex. The root plate has caused structure issues to the main supporting pillars holding up the rear of the cottage. The building has huge concerns and has been ackro propped to support the walls as seen in photographs attached. No work can be undertaken to these walls, whilst the Quercus is in place. As it will keep causing issues with its root plate. Pictures of the supporting walls and damage have been added in supporting documents. The Quercus is also moving listed cob wall, which has been repointed multiple times, but almost to point where repairs won't be possible.</p>

Location Address: Exwick House Exwick Court Exeter EX2 4RE

Proposal: Single large Magnolia tree to the left of main building (when facing the front aspect of the property), tree is situated approximately ten feet from the property in a raised bed area. This tree has branches and foliage which overhang the neighbouring property, the intention is to remove all overhang over neighbouring property boundary, severing branches wherever possible at a suitable fork up to 3m inside Exwick house boundary to ensure proper pruning practice. This level of pruning will remove the need for future works for approximately 5 years. The anticipated removal will be less than 10% of the trees spread on a single side. Work to be carried out by tree care professionals who are suitable qualified and will seek to climb the tree to complete the work safely with due consideration to Health and safety guidelines. Within the attached sketch plan the single tree subject of this application is highlighted as ?Tree 1?.

Delegation Briefing:

Decision Type: Permitted

Date: 20/11/2025

Location Address: Northmore House Cleve Lane Exeter EX4 2AR

Proposal: T1 - Monterey Pine - Thin the density of the lowest primary lateral branch (which directly overhangs the front garden of the adjacent property) by 30%. This will consist of third order growth only, natural target pruning, and dead wood. Diameter cuts made will be restricted to 2 inch diameter. Reasons - Residents have been worried about this branch for many years. Re-assurance has been provided, and weight removed in the past. The proposed work is designed to reduce the 'sail effect' of the canopy, without adversely affecting the vigour and health of the limb/tree. T2 - Dying Yes tree - Reduce to approximately 6 metres high, or the bowl of the main stem. Reasons - The tree is dying, with very little living growth left. The work is essentially a pollard, and a last chance effort to invigorate the tree into producing foliage. Although pollarding does not always work, this tree will not survive, and start dropping the dead lateral branches. Reducing the size of a crown can concentrate a trees resources into producing new foliage, and so this remedial work is recommended. T3 - Holm Oak - Reduce one stem overhanging the rear gardens of Canterbury Rd by 4 metres. Cut size of approx. 27cm. The stem in question comes into contact (lower down) with the previously reduced stem overhanging the gardens. Reasons - The stem originates from a groups of stems forming the crown of the tree. The tree was coppiced earlier in its life, hence the multi stemmed re-growth. This re-growth is inherently weak, and there are significant lateral forces exerted, especially in high winds, making it likely for stems to fail at the original union. Currently the stem in question moves to a greater degree (observed in moderate winds) when compared with the rest of the crown. Therefore this work is recommended. Recommendations/evidence is provided by Hywel Davies, Consultant for Exe Tree Care Ltd

Proposal: I am applying to reduce the face of the line of Evergreen Oaks that make up a hedge at Lister Close identified on the sketch map (scan 09-09-25_2055) as TPO 544. The hedge can be seen in IMG_20250731-092442, IMG_20250731-092546 and IMG_20250731-092413 which also show the extent to which it is encroaching onto the roadside. I am proposing to reduce the face that is encroaching onto the access road and Lamp post by approximately 6 feet (due to cutting back to appropriate pruning points) along the length of the hedge adjoining the roadside which is approximately 22.8m. Pruning the trees back by 6 feet will clear the Lamp post that is currently covered allowing light back onto the access road and also allow more visibility for the vehicles that use the Road. The two pictures attached; IMG_20250731-092506 and IMG_20250731-092425 show the branches making up the face of the hedge. As shown in the photos there are adequate pruning points that could be cut back to that would leave minimal wounds to the branches and plenty of points of new growth.

Proposal: I wish to fell and completely remove a Bramley apple tree. The tree is 20-25cm diameter at 1.5 m high. It was planted, I believe, in the 1930s, alongside the property boundary wall. It is in poor health and no longer produces good fruit (so a replacement tree was planted a few years ago, which has now reached maturity). An arborist has advised that it was a mistake to plant such a tree on a wall in the first place.

Delegated Decision

Application Number: 25/1503/CAT Delegation Briefing:
Decision Type: Permitted Date: 20/11/2025
Location Address: 8 St Leonards Road Exeter EX2 4LA
Proposal: We wish to carry out works on a Magnolia tree at the right hand side of our front garden (as viewed from the pavement) which is close to the border to our neighbours house at No 10 approximately half way between the pavement and the front of our house (see sketch plan attached). Prior to works to make our Yew tree (at the boundary with the pavement) more balanced, the magnolia tree was very much shadowed by the Yew tree and as a result has grown in a very unbalanced way making it lopsided. Now that the Yew Tree no longer causes this issue, we hope that the magnolia tree will grow in a more balanced way improving its health, sustainability and aesthetic. The contractor who carried out the works on the Yew Tree recommended that we ask for consent to trim the tree by a maximum of 2.5 metres. All works will be carried out by a suitable contractor. The Magnolia tree is not a native species and has been recognised by the LPA as being of less value than the Yew Tree which is subject to a TPO and for which we were given consent for similar works (creating a more balanced tree). Further, consent was previously given to trim back a magnolia tree(s) on our neighbours land at No 6 (also in the front garden). It would therefore seem manifestly unreasonable to refuse my request for consent for the above works. If you wish to carry out a site visit, we have off road parking available on the front.
